0.5 mm and 1 mm Pitch FPC/FFC Connectors

FH12 Series

■Features

1. Rotating one-touch ZIF mechanism

The one-touch rotating ZIF mechanism is easier to operate and works with a light force.

2. Clear tactile click

A clear tactile click is delivered upon the successful completion of the mating process

3. Supports high density mounting

The FH12's one-touch ZIF system requires less space than a slide locking connector and can be mounted in the center of the PCB.

4. Top & Bottom Contact and Vertical Mount type

There are three connection types available: top contact, bottom contact and a Vertical mount.

5. 1 mm pitch product

In addition to the 0.5 mm pitch connector, we also offer a 1 mm pitch connector.

6. Reinforced actuator

The FH12S version in 30, 40, 45, 50, and 53 pin counts are offered with a reinforced actuator that provides an extra measure of security against actuator breakage.

7. Supports 0.18 mm thick FPC

The FH12F version connector supports a 0.18 mm thick FPC (±0.05).

Double-sided FPC do not require a stiffener when used on the connectors.

Rotating one-touch ZIF mechanism

■Product Specifications

	Current rating: 0.5A DC(Note 1)	Operating Temperature Range:-40 to +85℃ (Note 2)	Storage Temperature Range:-10 to +50℃ (Note 3)
Rating	Voltage rating: 50V AC	Operating Humidity Range:Relative humidity, 90% max.	Storage Humidity Range:Relative humidity, 90% max.
		(Not dewed)	(Not dewed)

			(I VOI GCVVC	(Not dewed)	
Adaptive FPC/FFC contact specifications	t=0.3	±0.05 Gold plated		t=0.18 ± 0.05 for FH12F-*S-0.5SH	
Item	Sı	pecification	Conditions		
1. Insulation resistance	500M ohms minir	num	100V DC	;	
2. Withstanding voltage	No flashover or in	sulation breakdown.	150V AC	:/1 minute	
3. Contact resistance	50m ohms maxim	num	1mA		
4. Durability (Insertion/withdrawal)		e: 50m ohms maximum ks, or parts dislocation.	20 cycles	3	
5. Vibration	Contact resistance	ontinuity of 1μ s or more e: 50m ohms maximum. ks, or parts dislocation.	1 -	cy: 10 to 55 Hz, single amplitude of 0.75 mm, cles in 3 axial directions	
6. Shock	Contact resistance	ontinuity of 1μ s or more e: 50m ohms maximum. ks, or parts dislocation.		tion of 981 m/s², 6 ms duaration, wave waveform, 3 cycles in each of the 3 axis	
7. Humidity(Steady state)	Insulation resistar	e: 50m ohms maximum. nce: 50M ohms minimum. ks, or parts dislocation.	96 hours	at 40°C and humidity of 90% to 95%	
8. Temperature Cycle	Insulation resistar	e: 50m ohms maximum. nce: 50M ohms minimum. ks, or parts dislocation.	Temperature: $-40^{\circ}C \rightarrow 15$ to $35^{\circ}C \rightarrow 85^{\circ}C \rightarrow 15$ Time: $30 \rightarrow 2$ to $3 \rightarrow 30 \rightarrow 2$ to 3(minutes) 5 cycles		
9.Resistance to Soldering heat		f eting performance.	Manual s	At the recommended temperature profile coldering: 350±10℃ for 5 seconds	

Note 1: When passing the current through all of the contacts, use 70% of the current rating.

Note 2: Includes temperature rise caused by current flow.

Note 3: The term "storage" refers to products stored for long period of time prior to mounting and use. Operating Temperature Range and Humidity range covers nonconducting condition of installed connectors in storage, shipment or during transportation.

■Material

Part	Material	Finish	Remarks
Insulator	Polyamide, LCP(60 pos.)	Color : Beige	UL94V-0
Ilisulator	PPS	Color : Dark brown	UL94V-0
Contact	Phosphor bronze	Gold plated	
Metal Fittings	Brass	Tin plated

■0.5mm Pitch Bottom Contact Type

- Note 1: The coplanarity of each terminal lead within specified dimension is 0.1 mm Max.
- : Packaged on tape and reel only. Check packaging specification.
- Note 3: Slight variations in color of the plastic compounds do not affect form, fit or function of the connector.
- Note 4: After reflow, the terminal plating may change color, however this does not represent a quality issue.

 Note S: If there is no problem with the connector height, we recommend the type with the strengthened Fliplock actuator (FH12S-*S-0.5SH). Standard type connector height: 2 mm Connector height of type with strengthened Flip-lock actuator: 2.4 mm

■FH12 Series FPC/FFC Construction (Recommended Specifications)

1. FFC Flexible Flat Cable

	Material Name	Material	Thickness (µm)	
	Polyester film		(12)	_
	Adhesive	Thermoplastic polyester	(30)	
	(Nickel under plated / Gold plated), soft copper film		35	
←	Adhesive	Polyester type	30	
	Polyester		12	
▼	Adhesive	Polyester type	30	
	Stiffener	Polyester type	188	(Note)
		Total	295	

*Real tolerance of thickness dimension is on the order of $\pm 20 \,\mu\text{m}$ (275 to 315 μm)

Note: Use of a thicker FFC results in a stiffer lock action and the lock is more easily released.

A factor that contributes to thicker FFC is the use of 250 μ m stiffener which is thicker than the standard (188 μ m) product. This results in a total thickness of 357 μ m.

When using FFC, control of FFC thickness becomes easy if you indicate to us the thickness of the stiffener.

3. Precautions

- 1. This specification is a recommendation for the construction of the FH12 Series FPC and FFC (t=0.3 ± 0.05).
- 2. For details about the construction, please contact the FPC/FFC manufacturers.

■Recommended Temperature Profile

HRS test conditions

Solder method :Reflow, IR/hot air Environment: :Room air

:Paste. Solder composition

96.5%Sn/3%Ag/0.5%Cu (Senju Metal Industry, Co.,

Ltd.'s

Part Number: M705-221CM5-

32-10.5)

:Glass epoxy Test board

40mm×80mm×1.6mm thick

Land dimensions :Top and bottom

contact type 0.3mm×1.3mm Vertical mounting type

0.6mm×1.5mm

Metal mask :Top and bottom contact type

0.25mm×1.3mm×0.15mm

thick

Vertical mounting type 0.5mm×1.5mm×0.15mm

thick

This temperature profile is based on the above

In individual applications the actual temperature may vary, depending on solder paste type, volume/thickness and board size/thickness. Consult your solder paste and equipment manufacturer for specific recommendations.

■Connector Operating Instructions, precautions and recommendations

●Bottom Contact Type (common for 0.5mm/1mm Pitch)

1. FPC/FFC Termination procedure. Connector installed on the board.

Operation

1) Lift up the actuator. Use thumb or index finger.

1) Avoid grasping the actuator with two fingers or lifting the actuator with fingernail.

Precautions

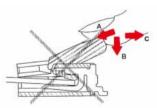

2) Do not use a thin tool such as the tip of a screwdriver to release the lock lever. Doing so will cause deformation of the contacts.

3) Do not apply force in the direction of arrows A, B, or C while the lock lever is open.

Doing so will cause the lock lever to become disen gaged, or will damage the hook portion of the connector body.

4) When inserting the FPC/FFC, do not forcefully rub against the surface beneath the connector insertion slot. Doing so will result in the FPC/FFC forcefully striking the contacts and this will cause contact deformation, peeling of the FPC/FFC conductors, and other irregularities.

5) Insert the FPC/FFC at the proper position of the connector insertion slot, and insert perpendicularly with respect to the connector. Improper insertion will cause continuity problems, disengagement of the lock lever, and damage to the hook portion.

2) Fully insert the FPC/FFC parallel to mounting surface, with the exposed conductive traces facing down.

■Bottom Contact Type (common for 0.5mm/1mm Pitch)

3) Rotate down the actuator until firmly closed. It is critical that the inserted FPC/FFC is not moved and remains fully inserted. Should the FPC/FFC be moved, open the actuator and repeat the process, starting with Step 1.

Operation

6) Partial insertion of the FPC/FFC, offset insertion, and diagonal insertion will result in an unfavorable engagement of the lock lever in which the lock lever is raised. To correct this, first remove the FPC/FFC and then reinsert it. Forcing the lock will damage the connector.

Precautions

7) When locking, handle the FPC/FFC so that a load is not applied to the FPC/FFC as would occur by pulling the FPC/FFC, or lifting it, etc. When a load is applied in the opposite direction to the rotational movement of the lock, an excessive load will be applied and this will cause connector damage.

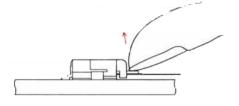

8) At the time of lock operation, application of force such as that indicated by the arrows in the diagrams below will cause the lock lever to disengage. When the lock lever has become disengaged, please exchange the entire con-

2. FPC/FFC Removal

- 1) Lift up the actuator.
- 2) Carefully remove the FPC/FFC.

Top Contact Type

Operation

1. FPC/FFC Termination procedure. Connector installed on the board.

1) Lift up the actuator. Use thumb or index finger.

Fully insert the FPC/FFC parallel to mounting surface, with the exposed conductive traces facing UP.

3) Rotate down the actuator until firmly closed. It is critical that the inserted FPC/FFC is not moved and remains fully inserted. Should the FPC/FFC be moved, open the actuator and repeat the process, starting with Step 1 above.

2. FPC/FFC Removal

- 1) Lift up the actuator.
- 2) Carefully remove the FPC/FFC.

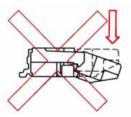

Precautions

 Avoid further lifting of the actuator once the lock has been released. Doing so will cause the lock lever to separate from the rotational shaft, and the lock lever will become disengaged or the hook portion of the connector body will be damaged.

2) Avoid further pressing of the lock portion from the locked condition when the FPC/FFC has not yet been inserted. Doing so will cause the lock lever to become disengaged from the rotational shaft, and the hook portion of the connector body will be damaged.

 Do not insert the FPC/FFC diagonally. Do i ng so will result in the corners of the FPC/FFC catching on the contacts and will cause deformation of the contacts.

4) When closing down the actuator apply equal pressure to both sides of the actuator.

●Vertical Mounting type (common for 0.5 mm/1 mm pitch)

Operation

1. FPC/FFC Termination procedure. Connector installed on the board.

 Verify that the actuator is positioned upright. If the actuator has rotated to the side, carefully rotate it upright. Actuator upright

Insert the FPC/FFC vertically in the connector slot assuring that the conductive traces of the FPC/FFC are facing away from the actuator.

3) Press down the actuator in the direction shown.

2. FPC/FFC Removal

Rotate the actuator upward and withdraw the FPC/FFC.

Precautions

1) Avoid forcing the actuator up or down without the FPC/FFC inserted.

 Do not attempt to open or over rotate an already released actuator (refer to the diagram below). These actions may damage the actuator.

 Do not insert the FPC/FFC diagonally. Doing so will result in the corners of the FPC/FFC catching on the contacts and will cause deformation of the contacts.

4) Do not press down vertically on the actuator when the FPC/FFC already inserted, it needs to be rotated to engage the lock. Refer to the diagram below. Doing so may cause actuator failure.
